Normal: ≤ 1.6  
 Mild (m): 1.6 - 5  
 Moderate (M): 5.1 - 17  
 High (H): >17

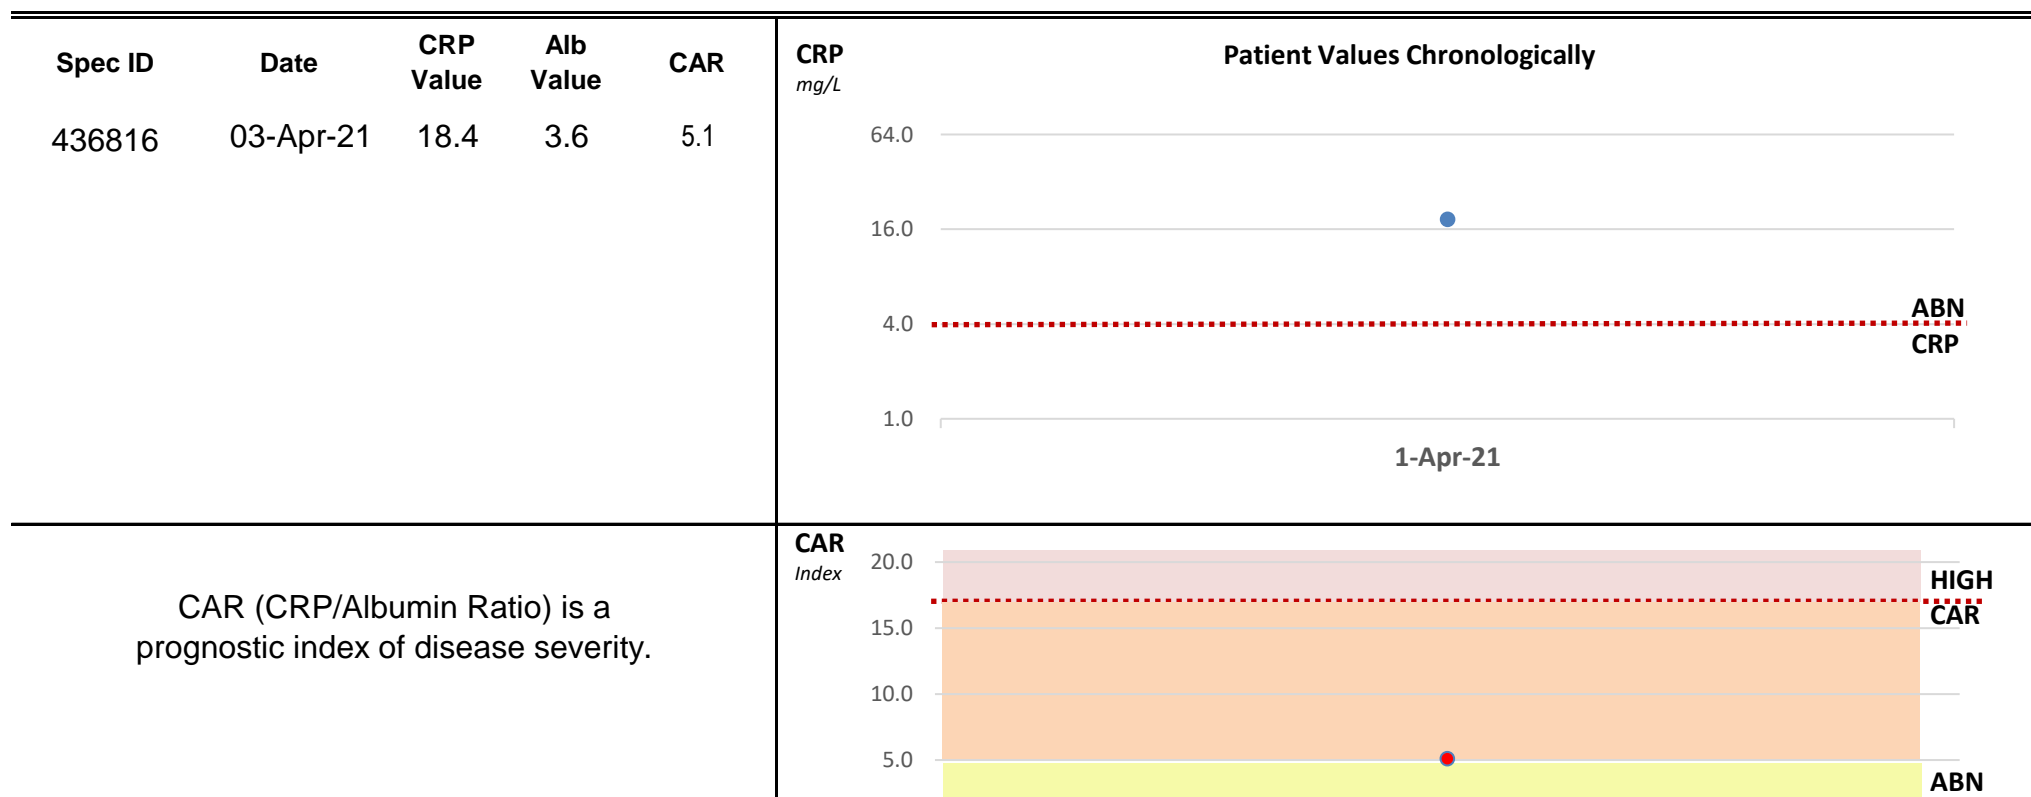

**Intpretive Comment - CRP**

Patient is in a heightened state of inflammation. If source is unknown, investigation is strongly suggested. Refer to VDI differential list for possible sources.

**Intpretive Comment - CAR**

Moderate CRP/Albumin Ratio (CAR) indicates poorer prognosis in patients vs those with mild or normal CAR. Primary driver of elevated CAR in this patient is the elevated CRP. Action is warranted to identify and resolve source of inflammation.

Code 36.1
