

Rx Clay[™]

Helps Regulate Bowel Function and Promotes Normal Stools

RxClay[™] (Hydrated Calcium Aluminosilicate) is a montmorillonite class of clay that adsorbs bacterial toxins, inflammatory cytokines, and metabolic toxins in the gastrointestinal tract, resulting in improvement of stool quality. A clinical trial in canine cancer patients who developed diarrhea as a side-effect of receiving chemotherapy found significant improvement following the oral administration of RxClay[™] when first-tier therapeutics for diarrhea failed to improve stool quality. RxClay[™] is free of heavy metal contamination, contains no available aluminum, is sterilized and ground to 60 micron particle size for improved dispersion and more rapid onset of action.

3.52 oz (100 gram) Powder

1 Scoop (1/8 teaspoon) Contains:

Hydrated Calcium Aluminosilicate Clay 500 mg

Directions For Use:

Give one level scoop (1/8 tsp) for every 10 lbs body weight, twice daily, when diarrhea is present. For maintenance, give one level scoop for every 25 lbs or as directed by your veterinarian.
