Joint Disease Blood Testing

WWW.VDILAB.COM

Our Services

VDI offers a range of specialty blood tests for early detection and diagnosis of joint disease in cats and dogs.

Hyaluronic Acid

Hyaluronic Acid (HA) is a marker of joint degeneration. It's available as a standalone, addon, or included in panels such as the ones below.

Complete Wellness

21 parameter panel for the early detection of disease, including osteoarthritis, and evaluation of essential vitamin levels.

Osteoarthritis Panel

Osteoarthritis Panel is a multi-test panel for the determination and monitoring of degenerative joint diseases in dogs and cats. Often used in conjunction with VDI's Test 'n Treat solution.

Pre-Stem Cell Therapy Panel

4 parameter panel for evaluating patients prior to stem cell therapy to confirm the absence of cancer. Includes HA testing for baselines on joint-related stem cell therapy.

Our Advantage

VDI blood tests offer an objective way to determine early signs of degenerative joint disease & monitor disease progression.

Test 'n Treat Integration ✓

Patient Specific Dosing Guidelines ✓

Recommended Products ✓

Low Sample Volume Required ✓

Inexpensive Sample Transport ✓

Joint Products

VDI partners with reputable companies to provide proven and effective solutions for patients with positive markers of joint degeneration.

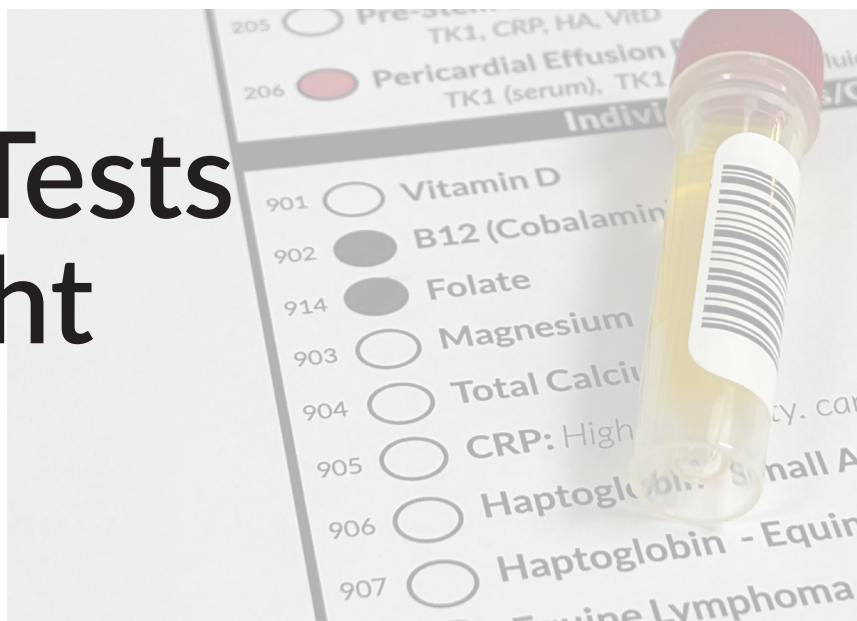

The Test n' Treat approach gives you options when results are abnormal, and repeat testing allows you to evaluate what is going on inside the joints.
