Feline Cancer Panel Report

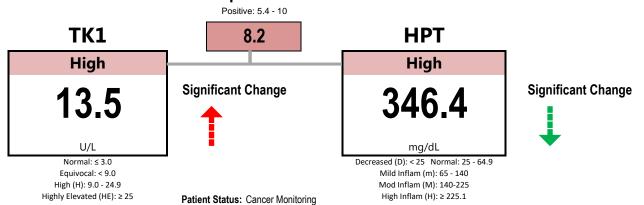

VETERINARIAN: PATIENT NAME: Elle Anderson MRN: 1025741 469642 DRAW DATE: 4-Mar-23 SPECIMEN ID: FACILITY: SPECIES: RECEIVED DATE: 9-Mar-23 Feline GENDER: Female Spayed REPORT DATE: 9-Mar-23 PH: AGE: 13.0 SAMPLE TYPE: Dried Serum - 2 WEIGHT: FAX: 13 lb PATIENT STAGE: BREED: DSH TREATMENT: unknown

Relevant Context (provided on TRF)

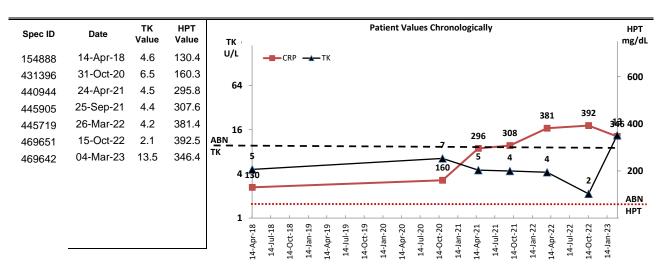

| Corticosteroids | Antibiotics | Suspected Ma | ss | Hypercalcemia |
|---------------------|-------------|---------------|--------------------|----------------|
| NSAIDs | Anemia | Enlarged Node | <u> </u> | B12 Deficiency |
| Chemotherapy | GI Signs | Fever | Conf. Infl Disease | Known Disease |

Neoplasia Index

Intrepretative Comment

Patient values for TK1 are above the critical threshold and HPT is severely elevated. TK1 has significantly increased from prior testing with HPT improving. If the patient is on anti-inflammatory medications (eg, corticosteroids and NSAIDS), false suppression may be occuring. Continue monitoring for further increases in TK1. If the patient is on corticosteroids, other anti-inflammatory medication, or has uncontrolled Cushings, it can suppress HPT.

Patient Monitoring Provides Guidance

Thymidine Kinase, type 1 (TK1) is a DNA proliferation enzyme and is elevated in dividing cancer cells. During therapy (chemo/surgery) the source of TK1 is reduced/eliminated and serum TK1 (sTK1) levels will fall. Conversely, growing cancer cells during disease recurrence will increase sTK1 levels. Suspected undiagnosed patients can also be followed in the same manner. This makes the Cancer Panel an effective tool for patient monitoring. Need Consultation? email consult@vdilab.com

INTERPRET THE REPORT

VDI Cancer Panel monitoring reports come with a number of important indicators. Use the key below to interpret what the results mean in context with your patient.

Significant Change

a change of 40% or more from prior. Studies show this level of change can precede cancer recurrence.

| Indicator | What does it signify? | What does it mean? |
|-----------|--|--|
| 1 | , | Indicates therapy is effective in reducing or eliminating the tumor or inflammation |
| TK1 Only | Significant increase in TK1 however TK1 remains below the 9U/L threshold | Indicates the level of change is worth watching – changes in clinical status of the patient is important |
| 1 | Significant increase in the biomarker above critical thresholds | Studies show this level of change in TK1 often precedes cancer recurrence, or is consistent with malignant tumor growth. |

Trending

2 or more data points in the same direction. Short-term trending events are the most valuable in confirming cancer recurrence.

| Indicator | What does it signify? | What does it mean? |
|-----------|---|---|
| 11 | Significant trend of 2 or more data points in the reduction or improvement of biomarker | Downward trending provides confirmation of effective therapy |
| 11 | | Upward trending has high probability of disease recurrence (TK1) or growing inflammation (CRP/HPT) and requires |
| 111 | 3 data points in the same direction of high biomarker levels | immediate intervention with either a change in therapy or rescue therapy |

RETEST WINDOW

Depending upon the type of cancer different monitoring intervals are recommended (see below). Use the chart below to identify appropriate retest window for this patient. These windows may be adjusted by the presence of clinical signs or elevated CAR (CRP/Albumin Ratio). Repeat tests within 6 months of previous automatically receive a discounted rate.

| Monitoring Purpose | Retest Window | Notes | |
|-------------------------------------|-----------------|--|--|
| Developing Disease, but unconfirmed | | | |
| Lymphoma, HSA, fast cancers | Apr 01 - Apr 15 | Retest window is recommended based on | |
| Solid Tumors, slow/indolent cancers | May 03 - Jul 02 | | |
| Therapeutic Monitoring | | common applications absent any context. | |
| Lymphoma, HSA, fast cancers | Apr 01 - Apr 15 | | |
| Solid Tumors, slow/indolent cancers | May 03 - Jul 02 | For more case-specific guidelines, email: consult@vdilab.com | |
| Remission Monitoring | | email: consuit@vdilab.com | |
| Lymphoma, HSA, fast cancers | Apr 01 - Apr 15 | | |
| Solid Tumors, slow/indolent cancers | May 03 - Jul 02 | | |
| Mass Removal/Metastatic Disease | Apr 01 - Apr 15 | Allow for complete wound healing | |
