

Rx D3 | Rx D3 Forte

Palatable Source of Pure Cholecalciferol

Rx D3 contains cholecalciferol, the precursor to Vitamin D3 for all animals. The cholecalciferol is blended with MCT oil and diluted sufficiently to enable safe usage in animals as small as 4 kg.

Rx D3 Forte contains a higher higher concentration of cholecalciferol than the standard Rx D3, providing 5 times the potency per drop to better suit the needs of the severely vitamin D3 deficient patient, the larger patient, or any other patient that would benefit from a higher concentration. Rx D3 Forte comes with a glass graduated dropper to facilitate accurate serving size.

By wellness-checking regularly for serum levels of Vitamin D3, those patients with insufficient levels of Vitamin D3 can be identified and supplemented accurately. A monthly follow-up test is recommended to insure safe and adequate administration, and testing thereafter as recommended by your veterinarian.

2 fl. oz. (60 ml)

Rx D3 - Amount per 1 ml:

Vitamin D3 (as cholecalciferol) 3000 IU
 Per one drop 100 IU

Rx D3 Forte - Amount per 1 ml:

Vitamin D3 (as cholecalciferol) 15,000 IU
 Per one drop 500 IU

Directions For Use:

A vitamin D3 test using the Rx Vitamins Vitamin D Plus test kit is recommended in order to establish a safe and effective dosage. Retesting in 8-10 weeks to ensure Vitamin D3 sufficiency is also recommended.
